

New Wied Texas Comal Co

October the 8th 1854

Dear Sir

Having received your favor of the 10th Aug. I send you herein fruit of *Syrax plebanifolium*, this plant was here at my doors nearly, at first discovered by me, Mr. Lindheimer had not seen it before, I could not know, if it was new or not, and am now very glad to have the name of it, at the same place grows an *Epipedium*, if the species is known or not, I could also not ascertain, as Lindheimer had also not seen it. I make me the pleasure to send you within a Register of all the plants, which I collected on the territory of New Wied, three miles and above New Braunfels on the Guadalupe, the flora is so rich and new to me here, that it hovers up my former beloved, studium of botany, but being not acquainted with the American flora and without books and means, here in finibus litterarum, I find many difficulties to get through, and I am therefore very happy that you will do me the favor to help me, where I can not further. I began this year to collect the Gramineae, can I send them? to name there is certain not possible without good Instrument. - Plants by me collected I will be very happy to send you any time you desire.

Some plants within send, please give me the names from according to number I am

Yours

very truly

L. C. Evendberg
